Overview and Basis of Accounting

Overview

The City of Gainesville, Florida owns and operates a combined utility system doing business as Gainesville Regional Utilities (GRU) which provides five separate utility functions. The utility functions consist of an electric generation, transmission and distribution system (Electric System), water production and distribution system (Water System), wastewater collection and treatment system (Wastewater System), natural gas distribution system (Gas System) and a telecommunication system (GRUCom). Each of these systems is accounted for internally as a separate enterprise fund. The systems are reported as a combined utility system for external financial reporting purposes.

Fiscal year 2014 budget projections are now reflected in the unaudited schedules in accordance with bond resolution.

We offer readers these abbreviated unaudited utility system financial statements and supplementary data for the period ended June 30, 2014.

Basis of Accounting

The unaudited statements of net position and the unaudited statements of revenues, expenses and changes in net position are presented on the accrual basis of accounting, utilizing Generally Accepted Accounting Principles (GAAP). Under this basis, revenues are recognized in the period earned and expenses are recognized in the period incurred. The unaudited schedules of net revenues in accordance with bond resolution are presented on the basis of accounting required in the Utilities System Revenue Bond Resolution as Supplemented and Amended (Bond Resolution). Under this basis, rates are designed to cover operating and maintenance expenses, debt service and other uses, excluding depreciation expense and other non-cash expense items. The schedules of net revenues in accordance with bond resolution also include the rate impact for the period presented.

GRU has adopted the uniform system of accounts prescribed by the Federal Energy Regulatory Commission (FERC).

Electric Revenue Fund

Financial Performance Discussion

Overall, total revenues in the electric system increased 13.2% and total expenses increased 20.8% for the period ended June 30, 2014.

The primary factor for the increase in total revenues and total expenses is due to payments of the fixed and variable portion of the Gainesville Renewable Energy Center (GREC) purchase power agreement which began in January 2014. Retail and purchased power expense increased \$29.3 million over the prior period with a corresponding increase in fuel adjustment revenue of \$27.5 million. Due to the increase in fuel expense, \$7.8 million was recognized in fuel revenues from the deferred fuel adjustment levelization balance.

Total sales of electricity for the period ended June 30, 2014, have decreased slightly by 0.7% from the prior period. Other electric sales for the period ended June 30, 2014, are 1.9% lower than the prior period. The difference is related to the discontinuation of wholesale sales to Seminole Electric Cooperative. Residential and commercial sales are comparable to the prior period as a fairly cold winter brought sales more in line after the mild fall experienced in the period ended December 31, 2013.

Interchange sales have increased \$2 million over the prior period. Interchange fuel expense has increased significantly due to improved sales. Interchange sales are subject to multiple variables including the availability of excess marketable generation from our plants and economic pricing conditions within the interchange market.

Steam power generation expense is down 13.6% compared to this period last year due to extensive auxiliary repairs performed at Deerhaven during the prior period. Nuclear power generation expense has decreased considerably as the Crystal River 3 (CR3) plant is now offline and GRU is no longer incurring monthly expenses associated with the plant. The plant was decommissioned as of September 30, 2013. Other power generation expense increased during the period ended June 30, 2014, due to a planned major outage at combustion turbine 4 at the J. R. Kelly plant. System control and load dispatching costs increased due to additional staffing. Transmission costs are down 5.4% due to increased capital labor over O&M for Gas & Electric Management and Substation & Relay cost centers. Distribution expense has increased 3.8% due to reimbursements received last year from mutual aid rendered to utilities affected by super storm Sandy.

Customer accounts and sales expense is down 28.9% due to the elimination of all conservation rebate programs except for the low income whole house rebate. Administrative and general expense is down 13.7%. This is largely due to increased fleet capitalization activity and timing of payments for liquidity fees.

Electric Revenue Fund
Financial Performance Discussion (continued)

Debt service for the period ended June 30, 2014, is lower than the prior period due to final payment of the 1992B, 2003B and 2003C bond series in fiscal year 2013.

The electric system reflects a negative \$8.8 million impact to rate stabilization as the bulk of the electric revenue season is in the final quarter of the fiscal year. In addition, total revenues and total expenses are expected to be close to projected budget for fiscal year 2014.

(2) Debt Service Budgeted is net of \$8.5 million UPIF utilized to pay Debt Service

Water Revenue Fund

Financial Performance Discussion

Overall total revenues decreased by 0.8% and total expenses decreased by 6.2% compared to the prior period

The water system implemented a 4.1% increase in rates for fiscal year 2014, to offset declining sales which is reflected in the relatively flat revenues.

Other revenue, which includes connection fees and capital contributions from developers, has increased from the prior period. During fiscal year 2014, the water system received capital contributions from developers in Longleaf subdivision, Solaria apartments, Walmart and others.

The primary factor in the reduction in total expenses is due to reduced administrative and general expense from fewer self-insured workers' compensation claims as well as increased fleet capitalization.

Debt service for the period ended June 30, 2014 is lower than the prior period due to final payment of the 1992B, 2003B and 2003C bond series in fiscal year 2013.

The water system reflects a positive \$645,000 impact to rate stabilization as of June 30, 2014. Total revenues and total expenses are expected to be close to the projected budget for fiscal year 2014 or just slightly below largely depending on weather.

Wastewater Revenue Fund Financial Performance Discussion

Overall, total revenues and total expenses remained relatively flat compared to the prior period.

Wastewater rates increased 1.7% during fiscal year 2014 and are reflected in the relatively flat revenue on fewer kGals used by customers.

Other revenue, which includes connection fees and capital contributions from developers, is up considerably over the prior period. The wastewater system received capital contributions from developers of the Longleaf subdivision, Solaria apartments, Walmart and others.

Wastewater collection expense is up 24.5% and is due to the fulfillment of several critical labor vacancies that existed in the prior period. Wastewater treatment expense has increased by 5.5% and is due to timing differences of variable chemical costs and an increase in electric service.

Administrative and general expense has decreased by 19.6% due to a lower allocation of field service charges and increased activity in fleet capitalization.

Debt service for the period ended June 30, 2014, is lower than the prior period due to final payment of the 1992B, 2003B and 2003C bond series in fiscal year 2013.

The wastewater system reflects a positive \$759,000 impact to rate stabilization as of June 30, 2014. Total revenues and total expenses are expected to be close to the projected budget for fiscal year 2014 or just slightly below largely depending on weather.

Gas Revenue Fund

Financial Performance Discussion

Overall total revenues increased by 11.9% and total expenses increased 16.7% compared to the prior period.

Residential and commercial gas sales were 6% and 4% higher for the period ended June 30, 2014. This was the result of colder than normal weather experienced during the winter months. Other gas sales and MGP include liquid propane gas sales, and the Manufactured Gas Plant (MGP) cleanup cost recovery factor.

The primary factor in the increase in revenues and expenses is due to much colder weather. Fuel expense purchased gas increased \$2.2 million over the prior period with a corresponding increase in the purchased gas adjustment revenue of \$2.1 million. Due to the increase in purchased gas, \$1.3 million was recognized in purchased gas adjustment revenue from the deferred purchased gas adjustment levelization balance.

Operation and maintenance expense are relatively flat compared to the prior period. Customer accounts and sales expense is down 9.6% due to reduced radio advertising and customer service cost allocation reductions. Customer accounts and sales expense is projected to be higher than the fiscal year 2014 budgeted amount. Administrative and general expense has decreased 6.9% compared to the prior period yet is expected to be similar to the projected budget by year end.

Debt service for the period ended June 30, 2014, is lower than the prior period due to final payment of the 1992B, 2003B and 2003C bond series in fiscal year 2013.

The gas system reflects a positive \$911,000 impact to rate stabilization as of June 30, 2014. Total revenues and total expenses are expected to be close to the projected budget for fiscal year 2014 or just slightly above.

Telecommunications Revenue Fund

Financial Performance Discussion

Overall total revenues increased by 17.3% and total expenses increased by 11.0%.

Revenues increased primarily in tower lease rentals and internet access revenues.

Operation and maintenance expense increased 11.6% primarily due to increased spending in voice mail system maintenance over the same period last year. Also contributing to the increase is capital to O&M adjustments made in the period ended June 30, 2014.

Customer accounts and sales expense increased 65.5% or \$100,000 over the same period last year. Customer service support allocations were revised to better align GRUCom's utilization of these resources. Administrative and general expense for the system is higher than the same period last year due to a change in the GRUCom allocation in IT and customer service cost centers. The allocation was revised to better align utilization of IT and customer service resources. Adjustments to labor allocation between capital and O&M will allow year-end projection to come in under budget.

Debt service for the period ended June 30, 2014, is lower than the prior period due to final payment of the 1992B, 2003B and 2003C bond series in fiscal year 2013.

The telecommunications system reflects a positive \$1.1 million impact to rate stabilization as of June 30, 2014. Total revenues and total expenses are expected to be below the projected budget for fiscal year 2014. Telecommunication sales are a continued focus for this system.

Financial Performance Discussion

Overall, the reduction in total assets is driven by a decrease in the debt service fund, the construction fund, and the utility plant improvement fund. The debt service fund decreased due to the normal scheduled semi-annual principal and interest payments due and paid in October 2013. The construction fund and the utility plant improvement fund continue to decrease due to normal capital outlay.

Current liabilities decreased due to normal fluctuations in payments to vendors, including fuel related payments.

Other payables decreased primarily due to the effect of making our semi-annual debt interest payment on October 1 in addition to the reclassification of short term debt to long term debt due to the reacquisition of liquidity facilities. In conjunction with the decrease in short term debt, long term utilities system revenue bonds increased accordingly.

Operating revenue was impacted by a budgeted transfer to the rate stabilization fund of \$6.7 million for the period ending June 30, 2014. The change in net position was a positive \$1.5 million.

Glossary of Terms

Glossary of Terms

All Systems

Construction fund – provides for funds to be utilized for the cost of acquisition and construction of the utility system.

Debt service fund – provides for funds accumulated to provide payment of principal and interest on, or to redeem, outstanding debt.

Rate stabilization fund transfer – reserves designated for unplanned events, revenue changes or unexpected losses and to stabilize rates over future periods through the transfer of funds to and from operations as necessary.

Utility Plant Improvement Fund (UPIF) - provides for funds used to pay for certain capital projects or debt service, the purchase or redemption of bonds, or otherwise provides for the repayment of bonds. The contribution level is established under a formula set forth in the Utilities System Revenue Bond Resolution. It represents the equity that the utility puts back into the system.

Interest income – represents interest earnings on utility investments.

Operation & maintenance expense – non-fuel – represents all operating, maintenance and administrative costs needed to support electric power generation, transmission and distribution, water treatment and distribution, wastewater collection and treatment, and telecommunication services provided by the utility.

Surcharge – additional charge to customers in the unincorporated service area, i.e. Electric – 10% and Gas – 10%, both equivalent to the 10% utility tax; Water – 25% and Wastewater – 25% both per F.S Chapter 180.

Electric System

Fuel adjustment – revenue from fuel cost recovered from customers beyond the amount that is recovered in the base energy charge. GRU's cost of fuel for the electric system is passed directly through to its customers. The base energy charge includes a portion of the fuel cost, 6.5 mils, or \$6.50 per 1,000 kWh. Fuel cost beyond this amount is applied to customer bills as calculated monthly, via a fuel adjustment rate.

Interchange sales – large blocks of energy sold to other utilities on a firm or non-firm basis. These sales are controlled through GRU's Control Area Services, which monitors excess availability of power generated.

Nuclear decommissioning/fuel disposal – as a partial owner of the Crystal River Unit 3 (CR3) nuclear power plant operated by Progress Energy, GRU was responsible for its share of future decommissioning costs. These costs are expensed annually and recovered through rates charged to customers. The fuel disposal cost represents GRU's share of costs associated with safely disposing of CR3's spent nuclear fuel assembly units.

Fuel expense – represents the cost of the fuel supply needed to generate electric power, i.e. coal, oil and natural gas, as well as purchased power costs and the fuel distributed directly to service accounts, i.e. natural gas.

Other electric sales – includes wholesale sales (sales for resale) to the City of Alachua, traffic signal and streetlight sales to the City and County.

Other revenue – includes miscellaneous revenue receipts not specified in other categories, such as commercial lighting and service charges.

Native load – amount of energy required to serve retail and wholesale sales (sales for resale).

Gas System

Cleanup cost recovery factor (MGP) – revenue collected, at a rate of \$.0505/therm, for the cleanup and renovation of the former manufactured gas plant site at Depot Avenue Stormwater Park.

Commercial & industrial (general service) – natural gas and liquefied propane service provided on a firm, non-interruptible basis for any purpose except for residential purposes.

Fuel expense – purchased gas – represents the purchase of natural gas, through long-term contractual agreements, for direct distribution to our gas utility services.

Interruptible & transportation – natural gas service provided on a non-firm basis to nonresidential customers. This service is subject to interruption pursuant to the policies and conditions stipulated to by the customer and the System. Also included is revenue for gas transportation to the University of Florida.

Other gas sales – includes other miscellaneous sales not specifically identified in other categories, such as Liquid Propane (LP) sales.

Other revenue - includes miscellaneous revenue receipts not specified in other categories, such as service charges.

Residential gas sales – represents natural gas and liquefied propane service provided on a firm, non-interruptible basis to households and other nonprofit living units.

Water System

Other revenues – includes connection fee charges for water service to new service locations plus miscellaneous revenue receipts not specified in other categories.

Wastewater System

Other revenues – includes connection fee charges for wastewater service to new service locations plus miscellaneous revenue receipts not specified in other categories.

GRUCom System

Internet access – revenue generated from the sale of retail Internet access. GRUCom provides dial-up Internet access services under the domain names GRU.Net and Gator.Net. High speed Internet access is also provided to commercial customers, government entities and to residents at several apartment complexes in the Gainesville area. High speed Internet access services are typically delivered to the customer location utilizing the GRUCom fiber optic network. Revenue from periphery services such as Web Site Hosting and e-mail only accounts are also included in this category.

Telecommunications revenue– includes revenue for sales of point to point and carrier access circuits delivered in whole, or in part, on the GRUCom fiber optic network. These sales are primarily to other telecommunications carriers, commercial customers and government entities requiring high bandwidth connections for delivery of data, voice and video signals. Also includes revenues from switched services provided by GRUCom. Currently GRUCom utilizes its voice switch to provide call in lines for dial-up access to Internet Service Providers including GRU.Net/Gator.Net.

Tower lease rental – revenue generated in conjunction with the lease of space on the City's communication and water towers for the location of antennas and related equipment. These leases are primarily with Cellular and Personal Communications Services (PCS) companies offering wireless communications in the Gainesville area. Also includes revenue from the rental of interface equipment to customers (Routers, Channel Service Units/Data Service Units, etc.) necessary for them to connect to GRUCom services delivered over the fiber optic network.

Trunking radio – revenue generated by the 800 MHz radio system, delivering switched voice and data services for public safety and other government entities. Revenues are collected through monthly subscriber unit charges.
